

CB. Increased watering of WET treatment to 15 minutes (up from 10 minutes)
This should increase from ~700 mL to ~1000 mL

CB, DB. 1st Destructive Harvest (leaf area/biomass).

CB. Checked ^{leaf} thermometer position/condition. ^{Note: "Top" is actually mid-canopy.}

Plant ID	Position	Condition
W-6	bottom	tissue dead only at thermometer
	top	OK
W-7	bottom	dead next to thermometer; probably OK
if - facing sun	top	OK dead around clip
W-10	bottom	dead around clip - should move?
	top	OK
W-11	B	dead at thermometer, probably OK
	T	dead next to thermometer; probably OK
M-6	B	DAT,
	T	DAT, OK
M-7	B	DAT, OK
	T	
M-10	B	OK
	T	DAT, OK?
M-11	B	dead next to thermometer, OK?
	T	DNT, OK?

maned barely stall (scratched)

Plant ID	Position	Condition
D-6	B	OK
	T	OK
D-7	B	DAT, OK DAT
	T	DAT, OK
D-10	B	DAT DAT, possibly, in afternoon sun
	T	OK
D-11	B	OK
	T	DNT, OK.

11/1 CB - Noticed M-5 had water pooled on top of plastic wrap.

11/1 Dec/checked scales/thermister data (CB).
