CB - Switched treatments (watering time still 20:05)

Wet → Dry

Dry → Wet

Moderate → Moderate

(So "W" is now getting 2 minutes

"D" is getting 15 minutes

"M" still getting 5 minutes)

~1600 downloaded live PAR

sensors & erased data on them

Be careful when using data &

this day from 11-1-2019 - west zone

→ was sitting around on the lab

bench since ca 1500

11/5 CB - Switched "Virgin" plants (W-29 to W-32) to "D" irrigation line (to keep fully watered)

11/6 CB - Downloaded thermistors & data, ca. 1215-115. Also checked thermistor condition. Moved thermistors in "W" block to upper-canopy position (from mid-canopy wind sensor position). * Replaced white duct tape w/ white electrical tape. Downloaded scale data. Loggers working ok.

11/6 CB, DB - Leaf width measurements, all plants on scales

11/7 CB - Growth staged all plants w/ marker @ VII. Overall, main most plants @ VII-VI2, a few at VI3. Virgin plants @ VII.

- Started photo-documentation. Will take (took) 5 photos

Photo 1: W block

2: M block

3: D block

4: Sacrificial block

5: Virgin block

(all photos facing south @ 10:13)

11/8 CB. Accidentally zeroed scale #5 (plant D-6). I reset the weight about 5 minutes later (by taking pot off scale & re-zeroing)
